A living wall naturally filters air through the absorption of CO2 and volatile organic compounds, leading to fewer health complaints such as headaches and respiratory irritations, as well as increasing focus and attention.

Contact with nature is essential for human health, and case studies have shown how access to nature decreases stress and irritability while increasing concentration. Plants naturally reduce our stress and make us feel more at ease in our surroundings while improving humidity levels and making and overall healthier environment.

Want a more efficient workplace? Design with nature in mind.
