

888 BOYLSTON STREET at the Prudential Center

BOSTON'S MOST SUSTAINABLE BUILDING

Living walls provide connections with nature and support a healthier urban ecosystem.

CERTIFIED

Living walls help improve:

- Indoor air quality and pollution control
- Productivity through collaboration spaces
- Sound control and soften noise pollution
- Temperature control and reduced heat island effect
- Corporate marketing:

A vegetated wall adds interest to any space by adding a unique design element. Living walls are an environmentally friendly product providing a quality environment and a strong visual support of corporate green strategies. Studies have shown that a company's building may be viewed as a symbol of its environmental and social performance and may be an attraction for job candidates.

Want a more efficient workplace? Design with nature in mind.
