MACH Energy Management Software

Make Your Job Easier with MACH Visibility

A Case Study on The Aon Center

Reaching Great Heights of Energy Savings & Sustainability

At 83 stories, the LEED Silver Certified Aon Center towers over the city of Chicago. Over the years, the Aon building team has worked to achieve remarkable energy savings: Approximately 5 years ago, the building was consuming about 20,000,000 kwh annually. After a number of energy efficiency capital projects, and the consistent use of MACH Energy’s software platform, the Aon Center in 2015 used approximately 14,000,000 kwh with a million kwh reduction based solely on operational improvements. Since working with MACH Energy, the Aon Tower has saved nearly $1.2 million in its energy consumption. These savings coincide with an increased tenant occupancy rate!

The Aon Center team considers MACH an integral tool for managing their building’s operations - indeed the team has logged in 2,020 times for 5,733 minutes.

MACH’s visibility is critical to managing our many systems and we are adding more meter points. I ask my team multiple times per day – “Have you been MACH-ing?” to make sure we have our fingers on the pulse of our operations. The software visibility makes our jobs easier and promotes friendly competition for energy savings on the team.

– John Schmidt
Chief Engineer, JLL
